

# TA-SDWAN

## (For Working At Home)

Enabling your enterprise employees with Work-from-home, Video conferencing, Remote application & services management, SD-Branch management...and many more.

COVID-19 has had a dramatic effect on work and social life. Enterprises have asked employees to work from home while governments have asked people to stay home and have closed schools. As a result, the whole family is using the home network, which amounts to an upsurge in traffic such that service providers are seeing a degradation in connection quality.

### Challenges for the home network

- Network performance on consumer broadband is highly variable
- They are not managed by IT, so who will help if things don't work?

Performance for software as a service (SaaS) and unified communication as a service (UCaaS) over the Internet isn't ideal. Office 365, voice, video & virtual desktop infrastructure (VDI) suffer with inconsistent wide area network performance, so the usefulness of these applications degrades. In order to improve performance of these applications

### Requirement for the home network

- A reliable connection to the cloud and access to multiple cloud networks
- Assured application performance
- Employees are using more SaaS and IaaS applications
- Employees are increasing usage of video conferencing
- Call center workers are using voice over IP (VOIP)

TA-SDWAN helps our customers with connectivity from remote, branch and home offices, addressing all the requirements to ensure a manageable, optimized, & secure work-from-home experience.

### SOLUTION COMPONENTS

#### TA-SDWAN Edge

Enables automatic prioritization of business traffic over that of other users in the home

#### TA-SDWAN Orchestrator

Acts as the management hub for this modern network architecture

### ADDRESS

Evacuee Trust Complex, 4th Floor, Office # 409  
Agha Khan Road, F-5/1, Islamabad 44000.
